

ervices

Anytime, anywhere
Putting the **client first**

BugSec provides a broad range of services in the field of information security. The core of the company's services includes the performance of advanced tests, implementing a unique methodology that its specialists have developed.

Above and beyond its proven, proprietary methodology, BugSec maintains a high level of professionalism by carefully selecting its team of specialists, seeking experts who are knowledgeable and highly experienced.

Core activities involve the performance of:

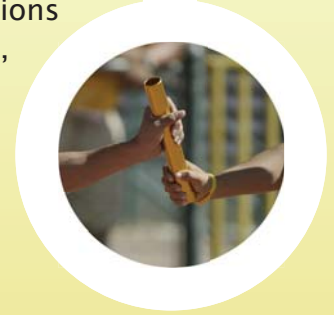

- Penetration testing
- Risk assessments
- Secure development & Hardening
- Integration and outsourcing services
- Security hot topics lectures

ervices

Penetration testing:

BugSec conducts numerous, diverse tests at a large number of organizations whose work requires them to store and utilize sensitive data. Our clients, who benefit from superior information security services, include world leading Banking & hi-tech companies; as well as governmental, public and private sector companies including insurance, communication and finance.

Risk assessments:

The main purpose of risk assessments is to arrive at a realistic evaluation of the risks faced by the organization's information systems. The evaluation is based on findings collected by BugSec following an in-depth examination of the way the organization's information systems are operated and the information they contain.

Secure development & Hardening:

BugSec provides professional support services to organizations' development teams and programmers. Additionally, organizations may purchase detailed instruction manuals for secure development and hardening guidelines, whose main purpose is to verify that programmers avoid errors while writing application codes or configuring infrastructures.

Our Products

Sec2Pro

Sec2Pro is a package of information security products designed to integrate security into each and every one of the stages of the project, starting from the seminal idea and ending in its transfer to production stage.

WebSniper
